**Election/Restriction**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a cable and extension for induction heating, classified in class 174, subclass 69.
- II. Claims 10-12, drawn to an insulation blanket, classified in class 428, subclass 74.
- III. Claims 13-22, drawn to an induction heating system, classified in class 219, subclass 632.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group III and Group I are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the induction heating system of Group III does not require a quick disconnect connector or the extension cable Group I. The subcombination has separate utility such as a power cable for use in other electrical devices other than the system of Group III.

Art Unit: 3742

3. The inventions are distinct, each from the other because of the following reasons:

Inventions Group III and Group II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the induction heating system of Group III does not even require an insulation blanket mat of Group II. The subcombination has separate utility such as for insulating structure, building or furnaces other than the induction heating system of Group III.

4. Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the cable of Group I has separate utility such as a power cable for use in other electrical devices and the insulation blanket of Group II has separate utility such as for insulating structure, building or furnaces. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter and the search required for each Group is not required for other Groups and vice versa, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
